

Multi-party conference bridging

DigiDial-VoIP Conferencing is a specialized service that provides a complete set of web-enabled, business conferencing features that enables all company offices and telecommuters to experience communications in a single, integrated environment, providing a company with complete control over its conferencing experience.

Whether it's an "on-demand" meeting with a few sales representatives or a carefully planned conference with a thousand investors, Conferencing makes it easy to schedule, modify, or cancel audio meetings using the browser-accessible User Web Portal feature. No operator is required to manage the call.

Benefits

- Fully integrated with DigiDial-VoIP service for seamless operation
- No special equipment required
- Eliminate need for costly 3rd party services and operator administration

Web-Based Capabilities

The DigiDial-VoIP Conferencing Service includes a unified, browser-based interface for scheduling conferences and controlling calls in process. The interface requires a minimum of training and requires no downloads or plug-ins. The Conferencing Server also provides functionality for web presentation of Microsoft Office documents (e.g. PowerPoint, MS Office file online). With the conference moderator able to direct the pace of the presentation, applications include collaborative workshops, online meetings, and interactive sales presentations.
