

DigiDial-VoIPSM

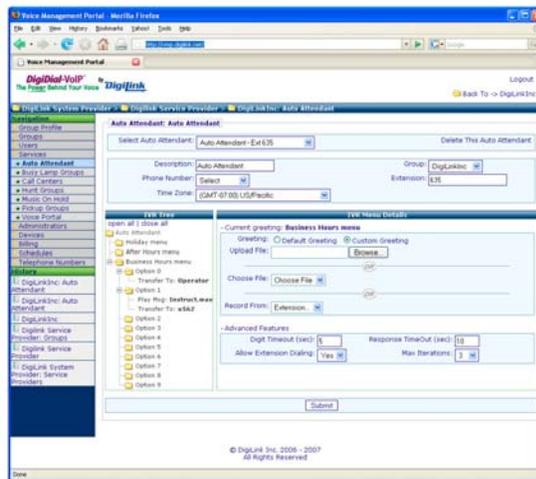

The Power Behind Your Voice

DigiDial-VoIP is DigiLink's hosted **Voice Over IP telephone service** for businesses. The service replaces a PBX or Centrex telephone system, delivering a full complement of advanced features without the hassle and expense of purchasing, configuring, maintaining, and upgrading the back-end. Businesses can finally manage their telephone systems easily and cost effectively—through the web browser, while realizing the cost savings that come from running voice and data over a single network.

It's not a matter of if you will switch to VOIP. It's when.

Further, users are able to leverage the ease and convenience of their web browser to administrate their own telephony experience, including checking messages (voice and fax), examining call logs, using the online address book, and customizing features to suit their own requirements.

Powerful web based management interface

Personal Locator is a find me/follow me feature which allows your users to decide *who* can reach them, *when*, and *where*. For example, you may choose to have callers on your "Family" list reach you during lunch: first your desk phone rings, and then your mobile. If you aren't reachable, a voicemail is taken and a text notification is sent to your mobile. Finally it makes sense to give out your direct dial phone number!

The future of network-enabled business telephone systems is finally here!

Perhaps best of all, you can do **more** for **less!** You can leverage a single managed broadband connection for all of your data and voice requirements. Say goodbye to the phone company! Local calls are FREE. Tie your multiple offices together—call across your global "campus", with your choice of 2, 3, 4 or 5 digit extension dialing for FREE. Domestic long distance starts at 3.5¢/minute. International calls are extremely competitively priced, too.

VOIP adoption has quadrupled in the last year. (In-Stat/MDR)

DigiLink would be pleased to show you in detail how DigiDial-VoIP can work for your business. **Call us today to arrange a complete demonstration.**
